

Leadership Skills Help

Accounting firms need to proactively encourage their team members to embrace the challenge of understanding various business concepts so that they develop the skills that will enable them to achieve the recognition of being a **“Product Champion”**.

Understanding leadership and then practising these skills will significantly contribute to the performance of the accountant.

The leadership development philosophy that is embedded within the **ESS BIZTOOLS** leadership modules has long reflected this understanding and incorporates:

- Introduction to leadership
- Teams and teamwork
- Making the difference
- Leadership people skills
- Relationships
- Motivation
- Counselling and coaching
- Delegation
- Problem-solving and decision-making

We believe that while leaders need to be decisive and firm, they must also develop the people skills that enable them to create the environment, irrespective of management level, in which their team members work willingly together to support the mission and achieve common goals.

This is the process that we are encouraging accounting firms to utilise and assist to develop their team as **“Product Champions”** with our extensive range of tools and services we supply at **ESS BIZTOOLS** www.essbiztools.com.au.
